4.5 (MINIMUM)

Statistics per Forening and capacity.
The solution must support the display of statistics on each Forening total requested and allocated times, the capacity utilization of the sportscenters, etc.

BRND possible solution:
For Calendar and Ansøgninger (list view)

Must be a column that shows hours of booking i.e

column A 15:00-16:00

column B 1 hour

The Admins need to be able to get an overview over total hours applied from a forening in a season (Ansøgninger) because they have a max number of hours a forening is allowed to have per season. Maybe a filter to search out on a forening and see total number of hours in export or otherwise.

5.2 (MINIMUM)
We need number of participants and geographical search (similar to what we still need for KBH)

14.4 (Extra and not a minimum requirement)

Calendar view with booking types

It is considered positive that the calendar overview is clear, so that it is possible to see the difference between different booking types, e.g. seasonal bookings, single bookings or special events.

The functionality is evaluated under the sub-criterion “User friendliness for administrators”.

BRND possible solution:
An icon or a filter to show whether a booking is series, single or something else.
We already have colors to cover a lot of stuff.
